

The microscopic examination made of pollen of the parents and hybrid by Dr. Edward T. Browne is gratefully acknowledged. In *M. media* 20% of 69 grains appeared aberrant, in the other parent 28% of 219 grains, and in the hybrid 25% of 223 grains. These pollen data do not suggest a distant relationship for the two parents. However, the nature of the relationship needs to be solved. It is hoped that someone may have the opportunity, which I do not have, to attempt artificial crosses and to make backcrosses to the two parents, thus providing data concerning the compatibility of the parental types. — DEPARTMENT OF BOTANY, UNIVERSITY OF GEORGIA.

NEW COMBINATIONS IN THELYPTERIS

GEORGE R. PROCTOR

In preparing an account of the ferns for a forthcoming volume on the flora of the Lesser Antilles¹, the writer is recognizing a total of 35 species in the genus *Thelypteris* for this geographic area. A number of these have not previously been formally transferred to this genus (or, in one case, was published in an illegitimate combination) : the following new combinations are therefore necessary:

THELYPTERIS ABRUPTA (Desv.) comb. nov., based on *Polypodium abruptum* Desv., *Mém. Soc. Linn. Paris* 6:293. 1827. (Type from the West Indies without exact locality). (Not *Dryopteris abrupta*

¹ This research supported by Grant No. G-4441 from the National Science Foundation, Division of Biological and Medical Sciences, for work on the flora of the Lesser Antilles in cooperation with Dr. Richard A. Howard of the Arnold Arboretum, Harvard University.

(Kunze) Ktze., 1891). Syn. *Dryopteris pyramidata* (Fée) Maxon, Contr. U. S. Nat. Herb. 10(7):489. 1908.

THELYPTERIS CLYPEOLUTATA (Desv.) comb. nov., based on *Nephrodium clypeolutatum* Desv., Mém. Soc. Linn. Paris 6:258. 1827. (Type stated to be from Jamaica, probably in error; the type specimen is labelled "in Antillis". So far as now known, this species is endemic to the Lesser Antilles).

THELYPTERIS CONSANGUINEA (Fée) comb. nov., based on *Aspidium consanguineum* Fée, Mém. Foug. 11:76, pl. 20, fig. 3. 1866. (Type from Guadeloupe, *L'Herminier in 1861*).

THELYPTERIS DELICATULA (Fée) comb. nov., based on *Phegopteris delicatula* Fée, Mém. Foug. 11:51, pl. 20, fig. 1. 1866. (Type from Guadeloupe, *L'Herminier in 1864*).

THELYPTERIS GERMANIANA (Fée) comb. nov., based on *Phegopteris germaniana* Fée, Mém. Foug. 11: 55, pl. 13, fig. 2. 1866. (Type from Guadeloupe, *L'Herminier in 1861*).

THELYPTERIS GLANDULOSA (Desv.) comb. nov., based on *Polypodium glandulosum* Desv., Berlin Mag. 5:317. 1811. (Type from the West Indies without exact locality).

THELYPTERIS HYDROPHILA (Fée) comb. nov., based on *Phegopteris hydrophila* Fée Mém. Foug. 11: 56, pl. 13, fig. 3. 1866. (Type from Guadeloupe, *L'Herminier in 1861*).

THELYPTERIS INVISA (Desv.) comb. nov., based on *Nephrodium invisum* Desv. Mém. Soc. Linn. Paris 6:257. 1827; *Polypodium invisum* Sw., Prodr. Veg. Ind. Occ. 133. 1788. (Type from Jamaica, *Swartz*) (Not Forst., 1786). Syn. *Dryopteris sloanei* Ktze., Rev. Gen. Pl. 2:813. 1891, based on *Nephrodium sloanei* Baker ex Hooker & Baker, Syn. Fil. ed. 2, 263. 1874 (Not Presl, 1825). *Dryopteris oligophylla* Maxon, Contr. U. S. Nat. Herb. 10(7):489. 1908. Under the present International Rules (Art. 72), Maxon's name is illegitimate because not the earliest one available for this species. *Thelypteris oligophylla* Proctor, Bull. Inst. Jamaica, Sci. Ser. 5:62. 1953.

THELYPTERIS LIMBATA (Sw.) comb. nov., based on *Aspidium limbatum* Sw., Jour. Bot. Schrad. 1800²:35. 1801. (Type from Guadeloupe, *Fahlberg*).

THELYPTERIS REPTANS (Gmel.) Morton, var. **TENERA** (Fée) comb. nov., based on *Goniopteris tenera* Fée, Mém. Foug. 11:60, pl. 15, fig. 3. 1866. (Type from Guadeloupe, *L'Herminier in 1861*).

THELYPTERIS RUSTICA (Fée) comb. nov., based on *Phegopteris rustica* Fée, Mém. Foug. 11:55, pl. 13, fig. 1. 1866. (Type from Ravine la Rose de Mateliane, Guadeloupe, *L'Herminier in 1861*). Syn. *Dryopteris dominicensis* C.Chr., Smiths. Misc. Coll. 52:384. 1909.
